/note="Vector: pCMVSport6.1; Site 1: EcoRI; Site 2: NotI; supplier: RNA was isolated from Nicotiana benthamiana tissues that include callus, roots from liquid culture grown plants, heat-stressed leaves (38 C, 3 hr and 6 hr), cold-stressed leaves (5 2 3 hr, 6hr), and pathogen challenged leaves (5 2 3 hr, 6hr), and pathogen challenged leaves (Pseudomonas syringae py tomato 12 hr; Xanthomonas campestris py campestris 12 hr, 18hr; Pseudomonas syringae py phaseolicola 18hr, and Xanthomonas campestris py vesicatoria 18hr). RNA was isolated from these tissues and pooled in approximately equal molar amounts."

/clone_lib="Nicotiana benthamiana mixed tissue cDNA
library, normalized, full-length"
/clone="Vector: pcMvSport6.1; Site_1: BcoRI; Site_2: NotI;
supplier: RNA was isolated from Nicotiana benthamiana
tissues that include callus, roots from liquid culture
grown plants, heat-stressed leaves (38 C, 3 hr and 6 hr),
cold-stressed leaves (5 C 3 hr, 6hr), and pathogen
challenged leaves (Fseudomonas syringae pv tomato 12 hr;
Xanthomonas campestris pv campestris 12 hr, 18hr;
Pseudomonas syringae pv phaseolicola 18hr, and Xanthomonas
campestris pv vesicatoria 18hr). RNA was isolated from
these tissues and pooled in approximately equal molar
amounts."

/clone_lib="GVSN"
/note="Vector: pBluescript SK +/-; Site_1: EcoRI; Site_2: XhoI; cDNA was prepared from polyA+ enriched RNA from the mixture of effective nodules of 40 day old plants harvested 36 hours post shoot removal and nodules collected from 2 month old plants at mid-pod stage. The cDNA was directionally ligated into the Uni-ZAP KR vector from Stratagene and packaged using Gigapack II Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in SOLR cells."

supplier: RNA was isolated from Nicotiana benthamiana
tissues that include callus, roots from liquid culture
grown plants, heat-stressed leaves (38 C, 3 hr and 6 hr),
cold-stressed leaves (5 C 3 hr, 6hr), and pathogen
challenged leaves (Fesudomonas syringae pv tomato 12 hr;
Xanthomonas campestris pv campestris 12 hr, 18hr;
Pseudomonas syringae pv phaseolicola 18hr; and Xanthomonas
campestris pv vesicatoria 18hr). RNA was isolated from
these tissues and pooled in approximately equal molar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CK280628 984 bp mRNA linear EST 15-DEC-2003 EST743350 Nicotiana benthamiana mixed tissue cDNA library, normalized, full-length Nicotiana benthamiana cDNA clone NBMA146 5'

WPI; 2003-102520/09. N-PSDB; AAL53985.

Novel ammonium transporter polypeptide useful for identifying enzymatic inhibitors, which is homologous to corn, soybean, wheat or rice ammonium transporter polypeptides.

Claim 14; Page 14-16; 27pp; English.

The invention relates to a novel ammonium transporter protein comprising 90% homology based on the Clustal method compared to: a corn ammonium transporter polypeptide of 183 or 63 amino acids; a soybean ammonium transporter polypeptide of 500 or 486 amino acids; a wheat ammonium transporter polypeptide of 494 or 470 amino acids; and a rice ammonium transporter 497 amino acids fully defined in the specification. The isolated polynucleotide is useful for selecting an isolated polynucleotide that affects the level of expression of the ammonium transporter polypeptide in a plant cell. The ammonium transporter protein is useful for preparing antibodies which are useful for detecting the

```
transporter protein in situ in cells or in vitro in cell extracts, and as targets to facilitate design and/or identify inhibitors of the enzymes that are useful as herbicides. The isolated polynucleotide is also useful for creating transgenic plants in which the polynucleotide is present at higher or lower levels than normal, and for designing and producing primer pairs which are useful in amplification or primer extension reactions. This sequence represents the soybean high affinity ammonium transporter protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                       240

```
The ammonium transporter (AT) gene isolated from Arabidopsis thaliana (AAQ88327) is a preferred AT gene for use in generating transgenic plants; the gene encodes the amino acid sequence in AAR74676. AT gene sequences can be incorporated into expression constructs in the sense orientation (for expression of translatable mRNA and hence synthesis of AT in the transgenic plants) or in the antisense orientation (resulting in antisense transcripts which inhibit synthesis of endogenous AT in the transgenic plants). Nitrogen metabolism is altered in the resulting transgenic plants; the changes in AT activity may also result in plants in the are suitable for "low input" crop management or which can be grown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           178

The invention relates to a novel ammonium transporter protein comprising of the invention relates to a novel ammonium transporter polypeptide of 183 or 63 amino acids; a soybean ammonium transporter polypeptide of 500 or 486 amino acids; a wheat ammonium transporter polypeptide of 494 or 470 amino acids; and a rice ammonium transporter polypeptide of 494 or 470 amino acids; and a rice ammonium considered polynucleotide is useful for selecting an isolated polynucleotide that affects the level of expression of the ammonium transporter polypeptide in a plant cell. The ammonium transporter protein consideration and plant cells or in vitro in cell extracts, and as transporter protein in situ in cells or in vitro in cell extracts, and as transporter protein in situ in cells or in vitro in cell extracts, and as transporter protein in situ in cells or in vitro in cell extracts, considered that are useful as herbicides. The isolated polynuclectide is also useful for creating transgenic plants in which the polynuclectide is present at higher or lower levels than normal, and for designing and producing primer pairs which are useful in amplification or primer extension reactions. This sequence represents the wheat high affinity ammonium contransporter protein of the invention Novel ammonium transporter polypeptide useful for identifying enzymatic inhibitors, which is homologous to corn, soybean, wheat or rice ammonium transporter polypeptides. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABL016175) and the encoded proteins (ABES7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to a novel ammonium transporter protein comprising 90% homology based on the Clustal method compared to: a corn ammonium transporter polypeptide of 183 or 63 amino acids; a soybean ammonium transporter polypeptide of 500 or 486 amino acids; a wheat ammonium transporter polypeptide of 494 or 470 amino acids; and a rice ammonium transporter 497 amino acids fully defined in the specification. The isolated polynucleotide is useful for selecting an isolated polynucleotide that affects the level of expression of the ammonium transporter polypeptide in a plant cell. The ammonium transporter protein
                                                                                                                                                                                         Novel ammonium transporter polypeptide useful for identifying enzymatic inhibitors, which is homologous to corn, soybean, wheat or rice ammonium transporter polypeptides.

is useful for preparing antibodies which are useful for detecting the transporter protein in situ in cells or in vitro in cell extracts, and as targets to facilitate design and/or identify inhibitors of the enzymes that are useful as herbicides. The isolated polynucleotide is also useful for creating transgenic plants in which the polynucleotide is present at higher or lower levels than normal, and for designing and producing primer pairs which are useful in amplification or primer extension reactions. This sequence represents the corn high affinity ammonium transporter protein of the invention
                                                                                                                                                                                                                                                                                                                                                      390 ALFAKKBYVKEVYGLGRAHGLLMGGGGKLLAAHVIQILVIAGWVSATMGPLFWGLNKLKL 449
                                                                                                                                                                                                                                                                                                                                                                          Genomic sequence for Listeria monocytogenes, useful e.g. for treatment and prevention of Listeria and related bacterial infections, and related polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the genome sequence of Listeria
monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of
                                                                                                                                                                                                                                                                                                                   62

it are useful for selecting probes and primers for detecting genes in L.

monocytogenes and related organisms, and for studying genetic

polymorphisms and other genomes. The present sequence is a protein

encoded by the genome sequence are useful for raising specific

antibodies, identification of L. monocytogenes and related organisms, and

for biosynthesis and biodegradation, especially biosynthesis of Vitamin

B12. The genome sequence and proteins encoded by it are also useful for

selecting compounds that regulate gene expression and cell replication

and modulate L. monocytogenes-related diseases. In addition, the genome

sequence and proteins encoded by it are useful in pharmacoutical and

vaccines compositions for the treatment or prevention of infections by L.

monocytogenes and related organisms. Note: The sequence data for this

patent did not form part of the printed specification, but was obtained

in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 305 TILFGKRVISGHWNVTDVCNGLLGGFAAITAGCSVVEPWAAIVCGFVASIVLI-ACNKLA 363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            74
                                                                                                                                                                                                                                                                                              The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -----AANV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ALAPTFAGQLWVQVEGVLATM--VYSGIATFIILKVIDLIIGLRVNSDDERMGLDLSQHG

The present invention describes a polynucleotide (I) comprising a sequence of a Bifidobacterium genome selected from the nucleotide sequence of a Bifidobacterium genome selected from the nucleotide sequence given in ABQ81842 and ABQ81843, or a sequence exhibiting at least 90% identity or which hybridises with the sequence spiven in ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a comprising a sequence selected from 1097 sequences given in ABQ81842 and ABP65154 ligated in frame to a polynucleotide encoding a cerivities, and can be used as an inhibitor of Salmonella. (I) (which is a probe) is useful for the detection and/or identification of a probe) is useful for the detection and/or identification of Salmonella. (I) (which is a serivities, under a probe) is useful for the detection and/or identification selected lactic acid bacterium longum in a biological sample. A carrier containing the lactic acid bacterium longum in a biological sample. A carrier containing the lactic and/or rotavirus. The carrier is a food composition selected from milk, yogurt, cutd, chees, fermented milks, milk based fermented from to and/or rotavirus. The carrier is a food congosition selected from tablets, liquid bacterial suspensions, dried oral powders, infant formula pet for chips to carry out analysis of the congression of the Bifidobacterium general baggla844 to ABQ81850 represent is thing from the present invention but not mentioned further within the listing from the present invention but is based on sequence information the supplied by the Buropean Patent Office on sequence information
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel polynucleotide comprising Bifidobacterium genome sequence useful as a probe or primer for detecting and/or identifying Bifidobacterium longum in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             146 GITSGSIAERTQFVAYLIYSSFLTGFVYPVVSHWFWSFDGWASAFKITDRLFSTGVIDFA 205

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                 325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      343 GTILIGFF-------GEGTGLLAGGDWKQLVVQLVIALVALLYSAVITAIAFAL 390

Octherical protein - Synechocystis sp. (strain PCC 6803)
Species: Synechocystis sp.
Variety: PCC 6803
Date: 25-Apr-1997 #sequence_revision 25-Apr-1997 #text_change 20-Jun-2000
Accession: S76017
Accession: S7601
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Accession: S76017
Status: preliminary
Molecule type: DNA
Residues: 1-541 «KANA
Cross-reference: EMBL:D64006; GB:AB001339; NID:g1001291; PIDN:BAA10864.1; PID:g100137
Note: the nucleotide sequence was submitted to the EMBL Data Library, June 1996
Superfamily: ammonium transport protein amtl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        105
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      172

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

Sequence 4217, Application US/09328352

Patent No. 6562958

GENERAL INFORMATION:

APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BAUMANNI FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC99-03PA

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NO 4217
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  13;

                                                                                                                                                                         Sequence 12960, Application US/09489039A
Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 2709-2004001
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR FILING DATE: 1999-01-29
PRIOR FILING DATE: 1999-01-29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            301 GLVGVTPACGYIGVGGALIVGIASGLAGIWGVTALKRWLRVDDPCDVFGVHGVCGIVGCI 360

Sequence 18525, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 18525

Sequence 9335, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: Gary Breton et. al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 2709.2004001

CURRENT FILING DATE: 1099/489, 039A

CURRENT FILING DATE: 1999-01-29

NUMBER OF SEQ ID NOS: 14342

SEQ ID NO 9335
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       158 FVAYLIYSSFLTGFVYPVVSHWFWSPDGWASAFKITDRLFSTGVIDFAGSGVVHMVGGIA 217

Patent No. 6551795

GENERAL INCRMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-02-18

PRIOR APPLICATION NUMBER: US 60/094,190

Sequence 19322, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 19322

LENGTH: 517
